

ZapBarge

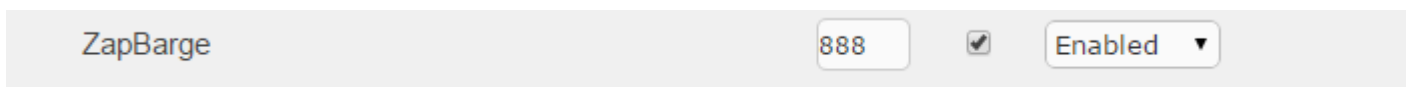

Feature Description

The ZapBarge feature on UCx provides the ability to listen to the conversation on a specified Dahdi channel, or prompts if one is not specified. You can hear them, but they cannot hear you. No indication is given to the other parties that their call is being listened to. Multiple people can all use ZapBarge to listen in on the same channel.

Configuration

The only configuration required to activate this feature is to enable the corresponding feature code. To access the Feature Codes page, perform the following steps:

1. Open the UCx Web-based Configuration Utility
2. From the **PBX** tab, select **PBX Configuration**
3. From the left side column, select **Feature Codes**
4. Scroll down to the **Core** section, select **Enabled** for the **ZapBarge** field

Usage

Dial the ZapBarge feature code from a phone, for example **888**. You will be prompted to enter the channel number followed by the **#** sign.
